Respected worldwide as being synonymous with quality, innovation and reliability, Sysmex is a market leader in the development and implementation of clinical diagnostic and health IT products and services for laboratories, hospitals and healthcare organisations. Our health IT product portfolio are designed to bring benefits including improved patient clinical services and efficiency advances and we are dedicated to building trusted, long lasting partnerships with our customers. EclairOur leading edge clinical information system, Eclair, helps healthcare organisations, hospitals, pathology and radiology providers streamline the management of diagnostic and clinical information. Regional Eclair CDRs with complete patient data form the foundation for clinical decision support. Closed loop diagnostic test request and result management ensure accurate test ordering and timely report delivery. Eclair Touch mobile app portfolio helps clinicians manage patient care tasks anywhere, anytime. Delphic LIS. Delphic LIS is the backbone for the medical laboratory, supporting every step of the workflow and providing end-to-end complete lab information management. Highly scalable system supporting several hundred interfaces. Centralised multi-lab management for standardisation of diagnostic testing processes. The ideal platform for regional consolidation of laboratory services. Delphic AP. Developed to meet growing demand and pressures on histopathology services, Delphic AP offers pathology providers a total workflow management and reporting solution. Bar-code driven, single-piece workflow, enabling automation and full specimen and item traceability. Supports the complex reporting requirements for cancer and genetics. Operates standalone as a complete

pathology system or integrates with the core LIS.
