Get ahead on the digital journey. Like other countries across the world, healthcare in Australia has reams of clinical documentation – recent estimates for 2015-16 suggest that there were 10.6 million discharge summaries, 28 million outpatient reports/letters and 2.2 million procedure notes. But is it in a digital format that is useful? EMR tools only work if their engine room is fueled with quality data. Speech-enabled clinical documentation tools help to overcome the data entry burden that the EMR can place upon clinicians. Everything you do improves exponentially with Nuance... Nuance provides a more natural and insightful approach to clinical documentation, freeing clinicians to spend more time caring for patients. Nuance healthcare solutions capture and communicate more than 300 million patient stories each year helping more than 500,000 clinicians in 10,000 healthcare organisations globally, providing a more complete and accurate view of patient care, which drives meaningful clinical and financial outcomes. Nuance solutions for

clinical documentation: Dragon Medical One Cloud-based speech recognition
