ISA Healthcare Solutions is part of the ISA Group, an organization with an impeccable 25 year history of delivering ICT services to clients across Australia and Asia. Our focus is on the intersection of healthcare and technology, and this is underpinned by our team of experts across the two domains, including clinicians, health administrators, management consultants and technologists, that work together at the cutting edge of health technology. Headquartered in Perth, Western Australia, we provide strategic clinical and commercial consulting services to healthcare providers across Australia, as well as a number of product offerings, whether this is advising healthcare clients on long term technology strategy or delivering innovative software, med tech or ICT infrastructure solutions.

Our vision is to empower healthcare professionals - and patients - with innovative technology and solutions that improve the quality of care whilst reducing the cost of care. To achieve this end, we have been working in diverse areas including primary care, hospitals, Aboriginal health, aged care, allied health, community care and population health to help clinicians deliver improved outcomes for a broad range of patients. Our customer base covers healthcare clients of all sizes representing a broad range of clinical settings including public and private health services, hospitals, clinics (GP, specialist and allied health) and Aboriginal medical services.

Core to our services is MMEx, a web-based e-Health platform that connects you to a diverse medical community. Designed by clinicians for clinicians, MMEx takes a patient-centric approach to enable coordination and secure communication between health professionals. Through MMEx, we can assist you to work collaboratively with GPs, hospitals and other providers to establish care pathways that facilitate appropriate and innovative health care to ensure better patient / 2

experiences and outcomes.
